greenbuildingproducts.eu has
products for your LEED, DGNB
and BREEAM projects.

**A future without sustainable development?
Unimaginable!**

The world is at one in believing that our future here on earth is only possible when sustainability in all matters and fields is consistently implemented. This transformation affects all lines of business - including the construction industry. Statutory provisions and standards, customer and market requirements, certification criteria, efficiency specifications, life-cycle considerations as well as price and deadline pressures are just a few of the target categories which need to be fulfilled for companies to stay competitive and sustainable. This is where we come in as your reliable, committed partner in achieving your aims. In this, we do not simply go along with the tide and content ourselves with the stage reached in current technologies, but try to keep one step ahead and shape the future.

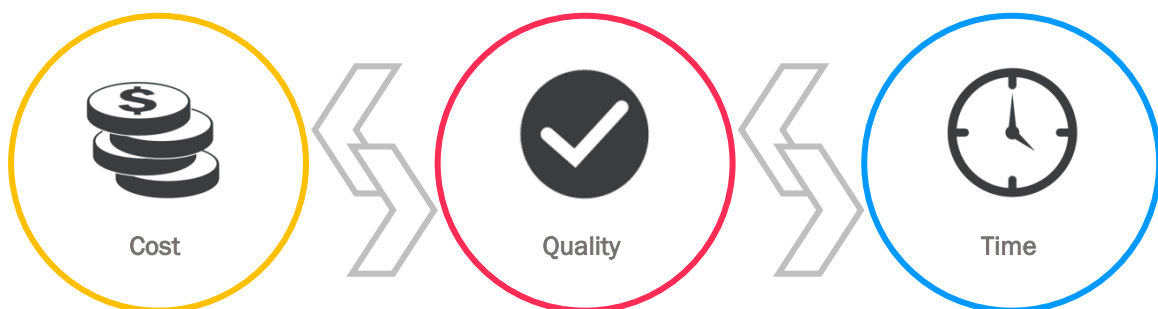

Benefit from our database.

For you as a construction product manufacturer : Seize the chance to publicize the sustainability and certification conformity of your products. Our qualified assessments provide all the information that architects, planners and construction firms need.

- Proof of certification conformity for your customers
- Publicity-effective, customer-proximity/oriented product placement
- Product-related declaration sheet for the verification
- Online product database for listing your products

For you as a architect, planner and construction firm: Our free database provides all the relevant product information and supporting records needed for evaluating materials in certification projects.

- Time saved in product researches and verification
- Planning reliability with Green Building projects
- Free use of the database

The standardized greenbuildingproducts.eu declarations enable you to easily and rapidly verify the product specifications from building certification systems such as LEED, DGNB and BREEAM!

Independent certification systems for sustainable buildings are becoming ever more important in the construction industry. Up to 30% of the certification outcome is affected by the construction products selected. However, only a few manufacturers to date provide information and product solutions to thoroughly deplete this potential.

We look forward to entering into a dialogue and working successfully with you.

The goal of all our services and business areas – the construction product database, our software tools and Green Building consulting – can be summarized in one sentence: Our goal is to provide a high planning reliability for our customers. In so doing, solely the customer's objective and performance are at the forefront. Our task is to prepare the way ahead and take the pressure off the customer.

»There are two instrumental success factors: Luck and a high degree of planning reliability. The latter is what you yourself can determine.«
 Dipl.-Ing. Thomas Hoinka – CEO HOINKA GmbH
